

Tools Needed

- Flathead Screwdriver

STEP 1

Locate the weep holes on the left and right sides at the bottom of the sill.

STEP 2

With a flathead screwdriver, pry the damaged weep hole cover from the tab.

STEP 3

Insert the new weep hole cover.
IMPORTANT: Be sure the weep hole cover is properly oriented, with the door facing downward.

TIP

Never caulk over weep holes with silicone caulk when sealing the exterior of your windows.
